VOLLEYBALL BY: AMELINA QUIROZ

Volleyball is a really popular sport at the moment, It's also a girl's and boys' sport. There are different types of volleyballs, like there is a regular that you can play on the court, in the water, or maybe in the sand. Sometimes people play it sitting down too. You could play volleyball for your school or maybe for a travel team. It's a fun sport that people like to do, sometimes it can even connect people together. There are a lot of good volleyball teams like Texas, Louisville, and San Diego. I personally like Texas, but that's just my opinion.

There are different types of positions in volleyball. You have the setter, libero, outside hitter, then you have the opposite outside hitter, and then the other two people in the back row. You have six people on the court at a time, mostly everyone subs in and out except for the setter. On our team we had two setters Savannah and Alexis. So they switched back and forth.

CHAT

INTERVIEWING TYLER OSTEN "SENIOR" BY: CARSON PULLINS

Q.What made you want to play basketball?

Q. How many years have you been playing basketball?

A. I have been playing competitive basketball for 6 years.

Q. How is your senior basketball year going?

A. It's going alright. It definitely could be going better.

Q. What are your averages for your senior season {points,assists,rebounds}?

My averages are 10 points 2 assists 4 rebounds.

Q. What/Who made you come to Bangor?

I moved houses to Bangor when my cousin Tay came down here, so I decided to move to Bangor. I came to play basketball and to see family.

Tyler Osteen is in the picture below with the crown on his head.

EDUCATION

WHAT DO YOU KNOW ABOUT EDUCATION? BY: LILIANNA CELAYA

In this newspaper article I'm going to tell you a little bit about education. Education is a fundamental asset for humans. It allows an individual to explore the world through their knowledge. It is the primary factor that empowers individuals to fight the challenges. A nation is an amalgamation of different societies. The behavioral responses of individual societies reflect the overall growth and development of the nation. Education is necessary for all to be successful and to become better people. It enhances our knowledge, develops confidence and helps to discover our skills. The education is divided into two types First is primary education which prepares our foundation. Secondary education prepares us for the path we want to go on and higher education.

Education is important for both men and women as both have an essential role in the development of a healthy and smart society. Education is necessary for providing a brilliant future and at the same time performs the most significant part in the growth and improvement

admitted success later in life. It acts as a tool that decides whether the individual was contented or happy as an adult or turns out as a depressed and emotionally devastated individual.

Some classes are more difficult than others for people because some people don't understand the same things as other people can understand. It's important to try your best in subjects that you don't really understand. You get out of education the effort you put in.

NEWS

PLANTS IMMUNE SYSTEMS BY:YANELLY MARTINEZ

A new biological mashup just dropped called "Pikobodies." It is a bioengineered immune system that is part plant and part animal that could help flora to fight off diseases. They take protein from animals to help the plants' immune systems. If something unusual makes it inside the plants, internal sensors sound the alarm and the infected cells die.

To create the Pikobodies the team used antibodies from llamas and alpacas with a protein called Pik-1. The protein detects a deadly fungus in the plant. For this test the animal's antibodies had been engineered to target fluorescent proteins. Plants with the Pikobodies kill cells exposed to the fluorescent proteins resulting in dead patches of leaves.

Plants expressing these proteins were able to mount an immune response when fluorescent proteins were introduced. Their work provides a way forward to quickly and specifically modify crop species to provide them with Pathogen resistance.

ENTERTAINMENT

A RELATIVELY NEW MOVIE BY: ERICK HERNANDEZ

Earlier this year a new movie was released called Skinamarink. It is an unusual type of horror movie. Instead of showing scary visuals or jumpscares it uses hidden clues to tell a story of sorts. This makes the movie not for everyone. The movie requires the viewer to be patient. It only uses random pictures and voices in the background.

The movie is either loved or hated. It is an experimental horror and does not have the intention of being scary. Many people complain that nothing happens and it is extremely boring. This is somewhat true. The movie doesn't have action or jumpscares or anything of that sort. Instead it has photos of random objects like door frames and windows.

The movie only had a budget of \$15,000 which is quite low for movies. This makes the special effects not the best. However that isn't the point. Without spoiling it, the movie tells a story of a boy in his house as things disappear.

As stated the movie is either loved or hated and the audience that would best like it are people who love diving into the story and figuring out what is going on.
